REDACTIVE VIDEO AND AUDIO REDACTION SOFTWARE SOLUTION DESCRIPTION

REDACTIVE is a video and audio redaction tool that automatically detects faces, people, vehicles, license plates, and small objects. It streamlines video redaction and saves time while compiling evidence for court, media requests, and complying with the Freedom of Information Act (FOIA).

Users can select any object in a video and REDACTIVE will scan the video for it, allowing the user to redact the object before or after the selection point, or throughout the entire clip. REDACTIVE also simplifies audio muting, letting users mute audio with a click and drag of the mouse.

Automated Face Detection

REDACTIVE automatically detects faces, people, vehicles, license plates, and small objects in video footage. This allows officers to quickly analyze footage for specific people or things, decreasing time spent manually redacting video instead of being in the field.

Intuitive Object Tracking

Officers can track specific individuals or objects throughout the video by selecting them at any point in the clip. REDACTIVE will scan forward and backward to find them, allowing officers to expedite the process of tracking, censoring, or highlighting certain objects or people throughout footage.

Simple, Selective Audio Muting

With REDACTIVE, distracting noises or an innocent bystander's voice can be muted simply by highlighting the area of the audio track with a click and drag of the mouse. Audio can be muted or replaced with an audible tone.

Any sales transaction following Motorola's quote is based on and subject to the terms and conditions of the valid and executed written contract between Customer and Motorola (the "Underlying Agreement") that authorizes Customer to purchase equipment and/or services or license software (collectively "Products"). If no Underlying Agreement exists between Motorola and Customer, then Motorola's Standard Terms of Use and Motorola's Standard Terms and Conditions of Sales and Supply shall govern the purchase of the Products.
